

LudiFocus: Bringing Clinical Attention Training into the Home

Brain training for kids, designed for home.

HELLO!

I'm a Designer & Researcher & Founder

Education

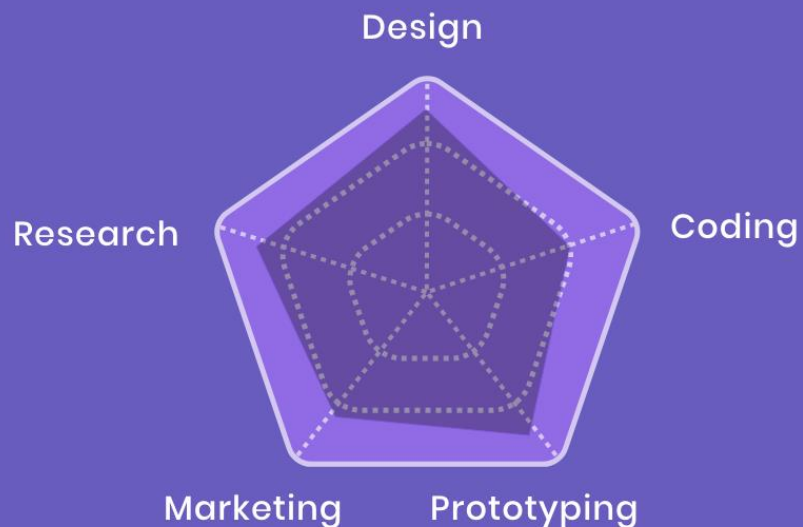

2020-2024

Bachelor of Arts, Product Design

2024-NOW

PhD student, Computer Science

Research Area: Human Computer Interaction

And... I'm a family member of a child with ADHD!

My Younger Brother

Name Yifeng Chen

Age 13 years old
Diagnosed with ADHD at age 8

Role Always First User

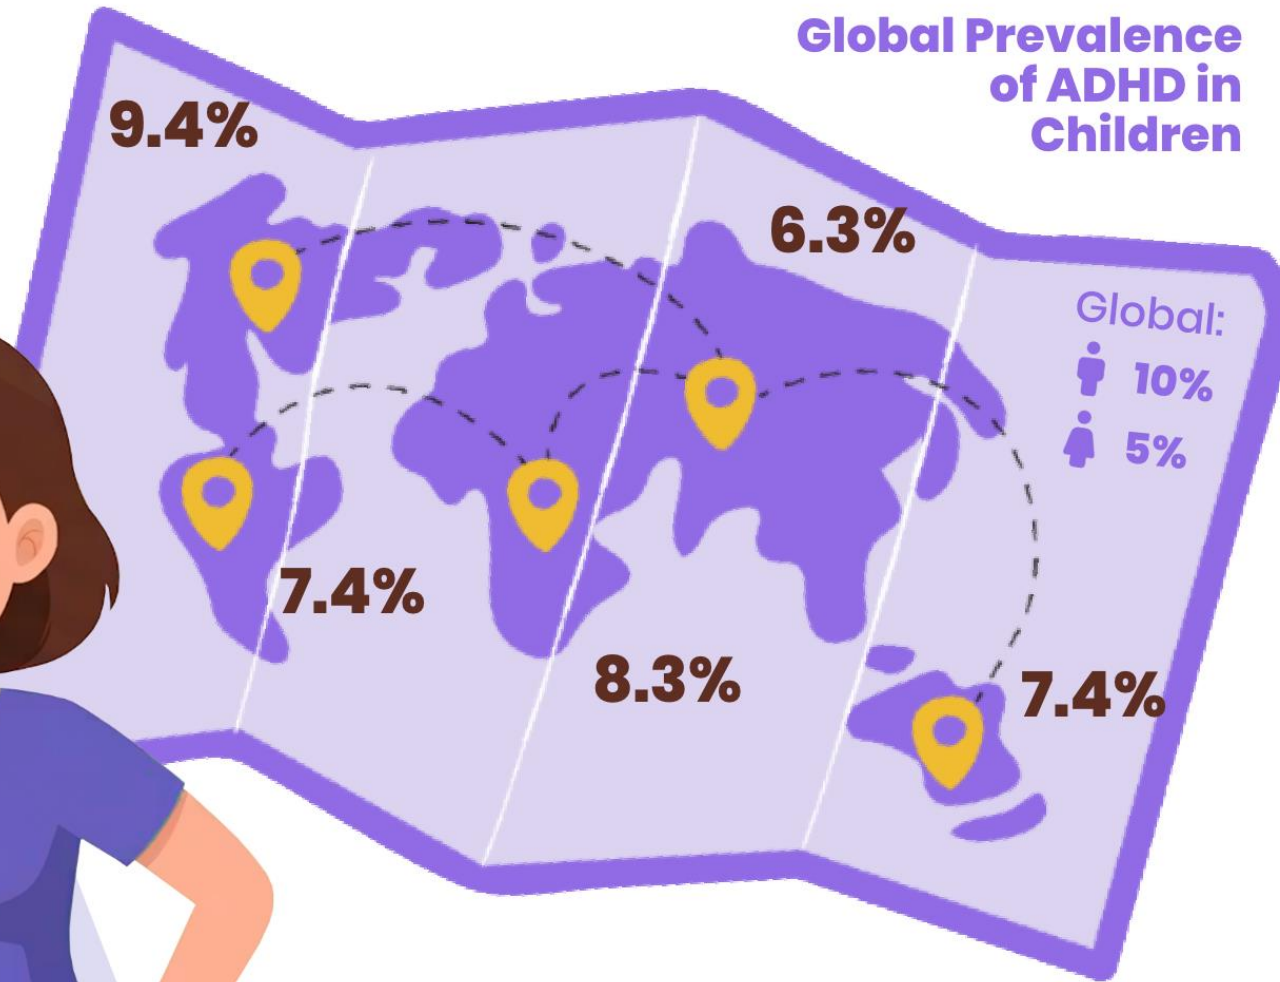

What's Problem?

Attentional
Dysregulation

Hyperactivity

Strained Fam
Dynamics

Impulsivity

ADHD affects **63,000,000**
children worldwide.

Current Solutions:

The majority of ADHD medications prescribed are **stimulants**.

Medical Side Effects:

50%–80%
Loss of Appetite

25%–50%
Sleep Difficulties

20%–30%
Headaches

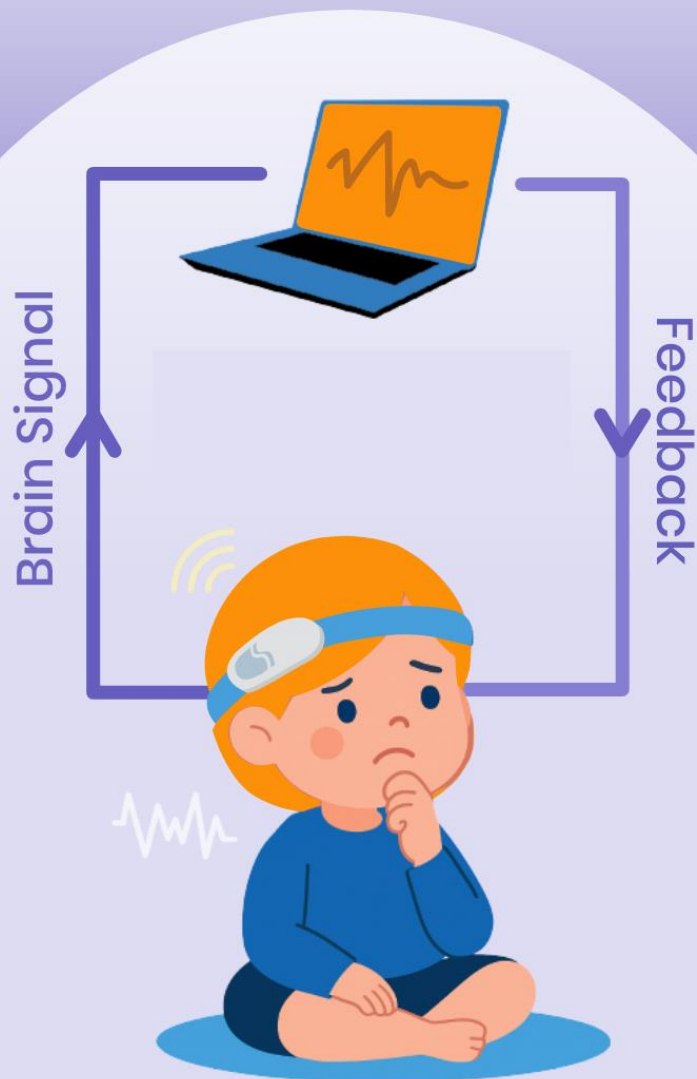

10%–30%
Stomach Pain

10%–30%
Discontinue medication
due to intolerable side effects

Better Solution: Neurofeedback Training

Why is it good yet so rarely used?

High Costs

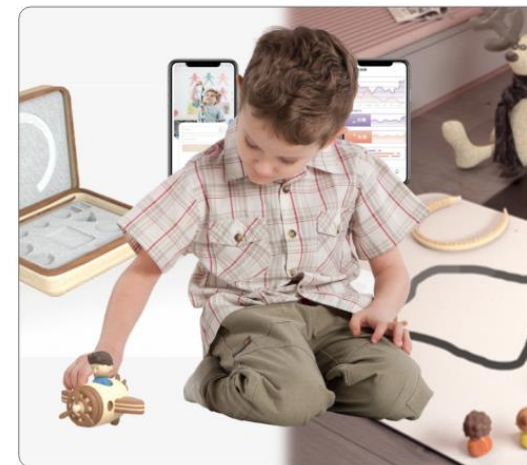

Lack of Family
Involvement

Time Costs

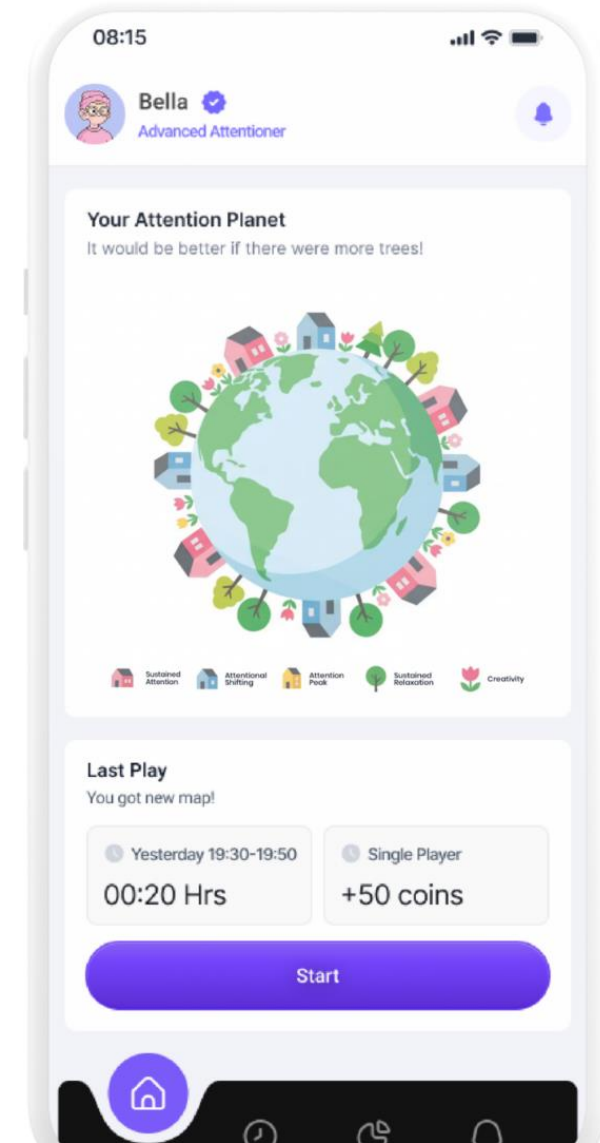

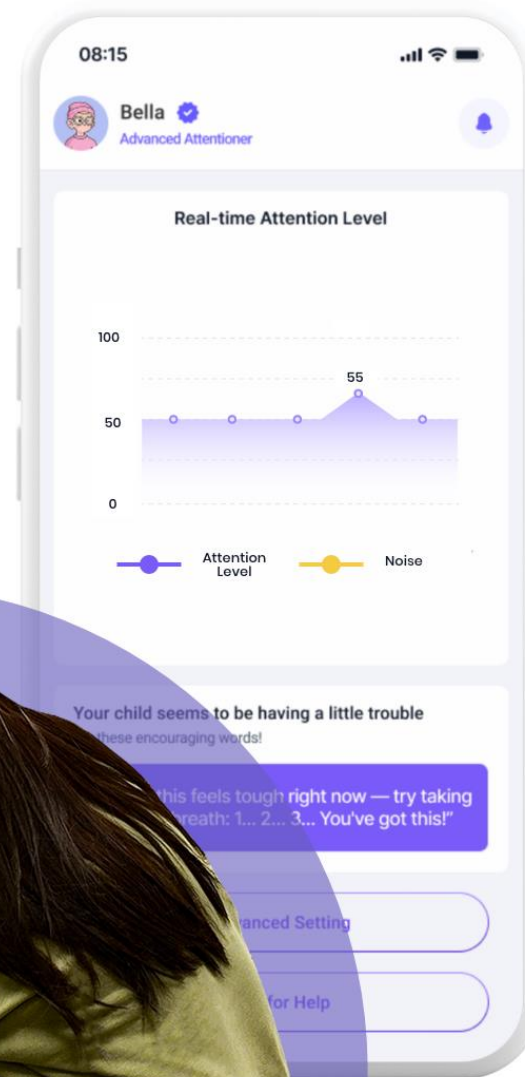

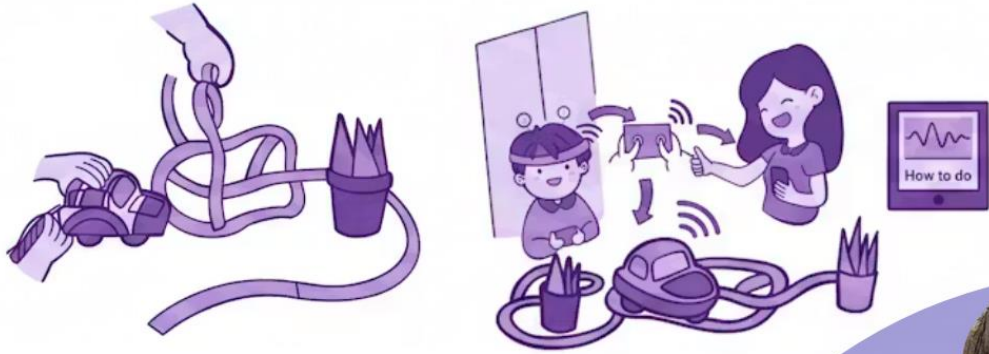

Low
Engagement

Our Solution

Our magic: LudiFocus

AttentionGo is a gamified, tangible and motorized neurofeedback training system.

The Magic

“

Not a treatment. Not a medication. A mirror that teaches children to understand their own minds.

”

01

Low Costs

Low money and time spend

02

Engagement

Embodied, game-based interaction

03

Parent-child Connection

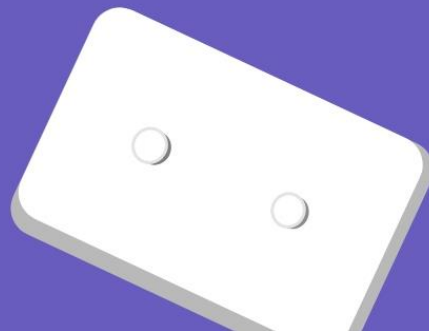

Designed for family play together

04

Grow

Adapts to every child, ages 7-12

Market Size:

TAM \$ 1.5B

Target children × ADHD rate × high-income market × device price

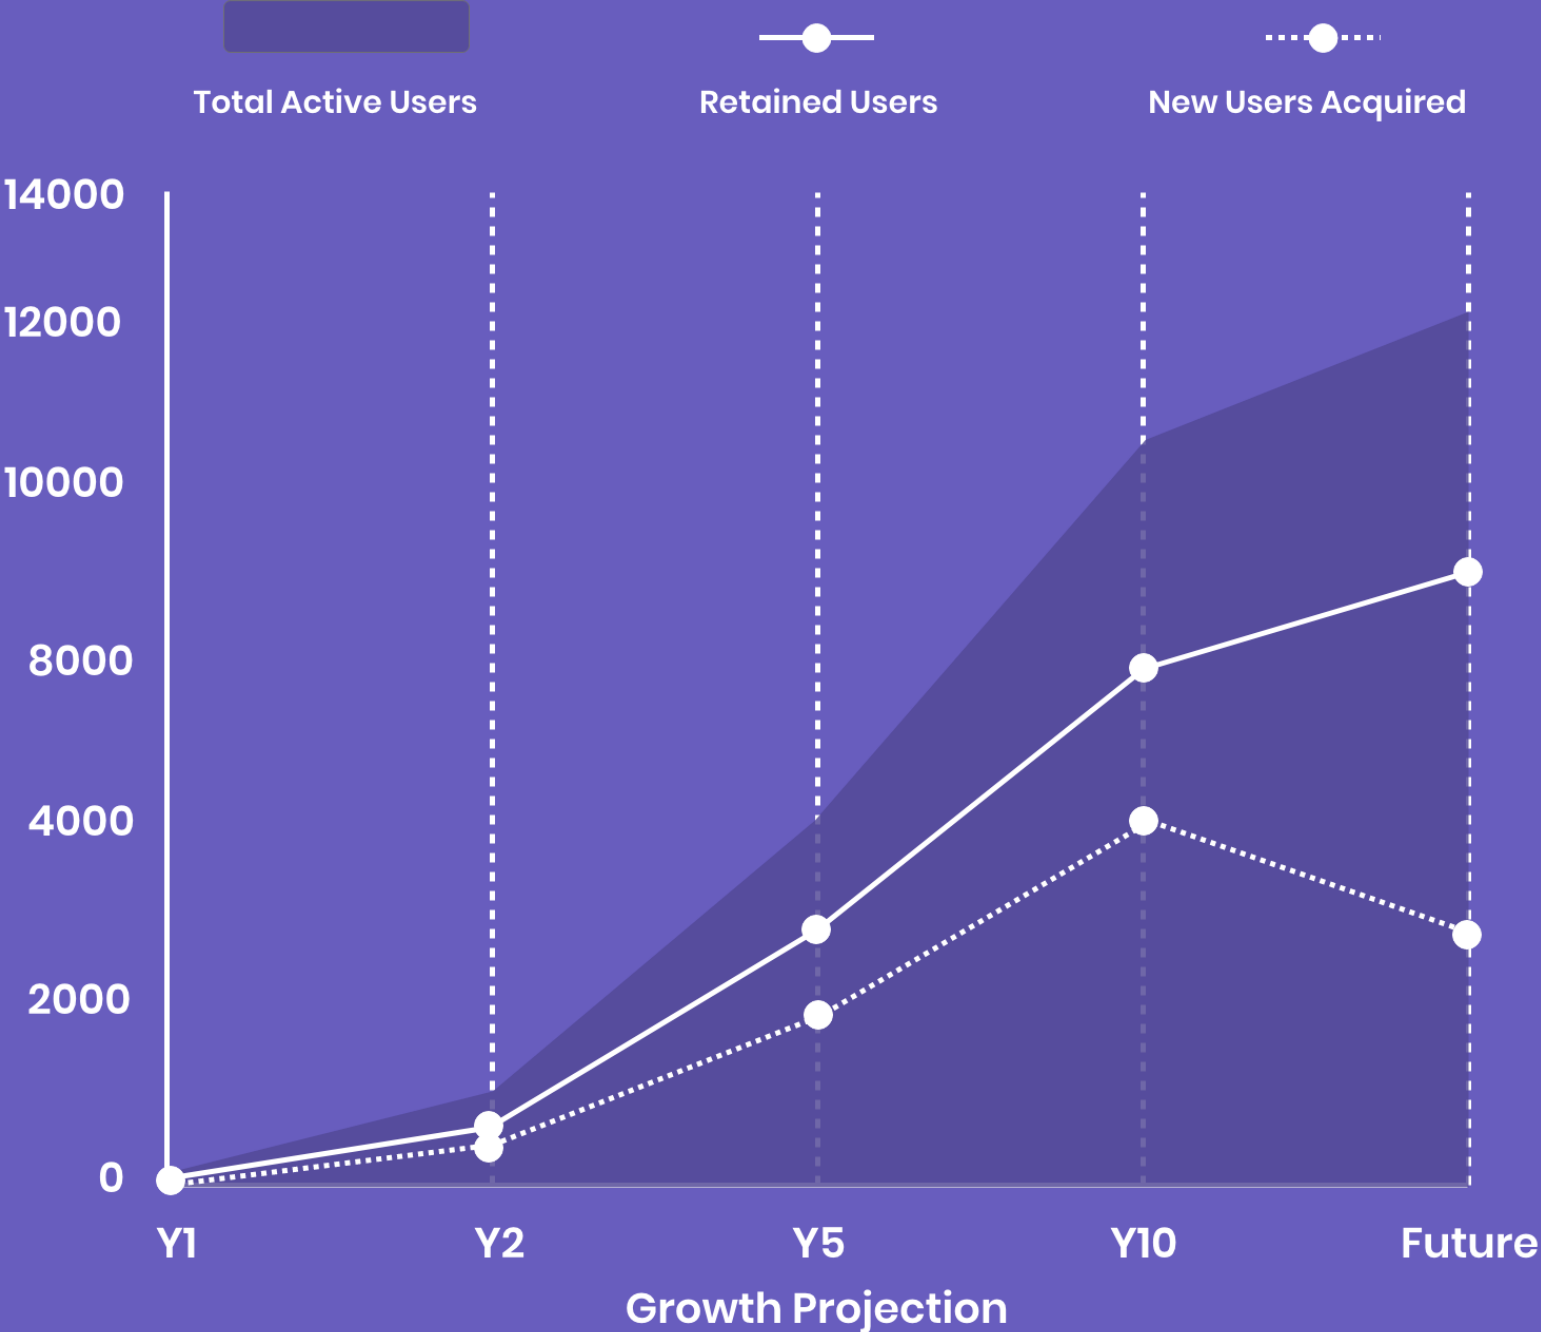

SAM \$ 681M

US + Canada children with ADHD × device price

SOM \$ 55M

North America neurofeedback market × ADHD segment × Target share

Revenue Streams

Competitive Landscape

From: Medication

No side effects. Builds real self-regulation skills — not chemical dependency.

From: Clinical NFT

No clinic visits. Save \$100–200/session. Parents stay involved at home.

From: Adult-focused NFT

Built for children, not adults. Our framework keeps kids intrinsically motivated.

From: Home-based NFT

Real EEG feedback — not just a game. Measurable brainwave data parents can see.

Harmful Assumption

“Children with ADHD need to be ‘corrected’ to be like neurotypical children”

Misunderstanding

“Children with ADHD just have an attention problem”

Traction

Quantitative Research

36-User Comparative Study

Qualitative Research

In-Home Experience Study with 5 Children with ADHD and Their Parents

Ongoing Research

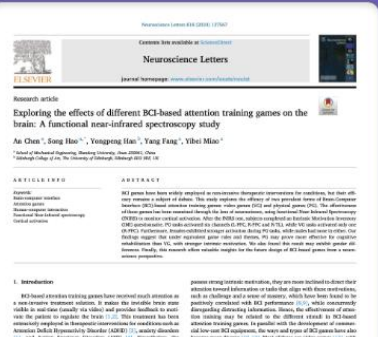

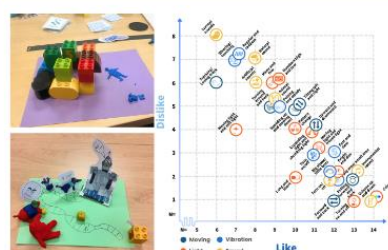

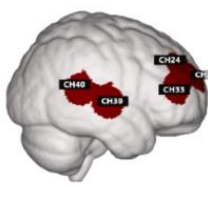

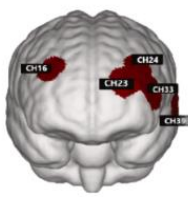

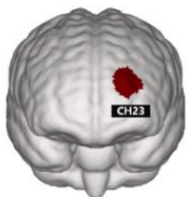

Co-Design Sessions with 18 Children with ADHD

Vedio Game (VG)

Physical Game (PG)

Current

It's a big question!
We are trying to solve it!
